

MISUSING PRESCRIPTION DRUGS FOR ANY REASON,
CAN KILL YOU.

If They Had Known

Knowing these 5 things could help save
your life or the life of a friend.

1

MIXING PRESCRIPTION DRUGS WITH ALCOHOL CAN BE TOXIC

Prescription drugs are not for partying. Xanax mixed with alcohol killed Clay - it could kill you, too.

2

ACCIDENTS CAN HAPPEN TO ANYONE

Whether it's your first time, or you've done it before... misusing prescription drugs for ANY reason can lead to death. You don't know how your body will react.

3

DON'T HESITATE TO GET HELP, EVERY MINUTE COUNTS

If you think someone is in trouble, call 911 immediately.

- Don't worry about getting in trouble,
- Don't EVER leave someone alone, and
- Don't assume it's "ok" to let them sleep it off

You could be saving a life.

4

SELF-MEDICATING YOUR ANXIETY, STRESS OR DEPRESSION WITH UNPRESCRIBED PRESCRIPTION DRUGS IS A RISK NOT WORTH TAKING

It only takes one bad pill to trigger an addiction or take your life.

5

PURCHASING PRESCRIPTION DRUGS ONLINE OR OFF THE STREET IS EXTREMELY DANGEROUS

Fake pills purchased online or off the street many look like the real thing, but they can be deadly. Fentanyl laced prescriptions are nearly impossible to detect - until it's too late.

Don't take that risk.
